

The idea of this little booklet is to help parents support their children in learning their Number Bonds, which are vital to success in mathematics.

Please spend a few minutes each night practising one of the number stories until your child knows it *by heart*.

For the first sticker, your child will need to recite the number story by heart.

For a second sticker, they will be asked to answer random questions about the story using lots of different vocabulary, eg. Plus, add, more than, less than, subtract, minus etc.

For their final sticker, they will be asked to answer “missing number” type questions about the story, eg. “What do I add to 4 to make 7?”

Stickers will only be awarded if the answers are given quickly (and I am very mean with them!!), but do encourage your children to “have a go” when they are ready!
