## Section 1.

a. Use $<,>$ or $=$ to make the statements correct.

b. Draw objects to make the statement true.

## Section 2.

a. Circle the greatest number in each pair.

| Nine hundred and two | 920 |
| :---: | :---: |
| 500 and 63 | 568 |
| 7 7 hundreds and 6 ones | 76 tens |

b. Use $<,>$ or $=$ to make the statements correct.

C. Complete the statements.

$$
600+70+4>600+
$$ $+4$

$\qquad$

## Section 3 - Order these numbers!

d. Amir has 3 jars of sweets.

b. $681 \quad 186 \quad 861 \quad 168$
c. $\quad 379 \quad 793 \quad 937 \quad 739 \quad 397$ $\ggg \gg$
$\qquad$
$\qquad$

C

Jar C contains 175 sweets.

How many sweets could be in jar B? Explain how you know.

## Challenges

(i) These are the heights of the people in one family.

| John | Gemma | Brett | Kim | Dani |
| :---: | :---: | :---: | :---: | :---: |
| 185 cm | 126 cm | 175 cm | 53 cm | 170 cm |

(iii) Each number has the same digit missing.

$$
\text { _ } 56<7 \_3<75
$$

How many different numbers could replace the missing digits?

Who is the 3rd tallest person?
The 3rd tallest person is $\qquad$ because
(ii) Write the weights of the boxes in order.

Start with the lightest box.

## Section 1.

a. Use $<,>$ or $=$ to make the statements correct.

b. Draw objects to make the statement true.

Any representation of a number $>922$

## Section 2.

a. Circle the greatest number in each pair.

b. Use <, > or = to make the statements correct.

c. Complete the statements.

$$
600+70+4>600+\ldots+4
$$

Two hundred and five $<\frac{\text { any number }}{\text { greater than } 205}$

## Section 3-Order these numbers!

## a. $259 \quad 952529592$ $\frac{952}{\frac{\text { largest }}{\text { number }}}>592>529>\frac{259}{\frac{25}{\text { smaller }} \begin{array}{l}\text { number }\end{array}}$

b. $681 \quad 186 \quad 861 \quad 168$
$861>681>186>168$
d. Amir has 3 jars of sweets.

Jar A contains 235 sweets.
Jar C contains 175 sweets.

How many sweets could be in jar B? Explain how you know. (any number $>175$ and <235)

Jar B could contain 200 because the number must be less than 235 (most) and greater than 175 (least).

## Challenges

(i) These are the heights of the people in one family.

| John | Gemma | Brett | Kim | Dani |
| :---: | :---: | :---: | :---: | :---: |
| 185 cm | 126 cm | 175 cm | 53 cm | 170 cm |

Who is the 3rd tallest person?
The 3rd tallest person is Dani because
185 cm (tallest) $>175 \mathrm{~cm}(2 \mathrm{nd})>170 \mathrm{~cm}$ (3rd)
(iii) Each number has the same digit missing.

$$
\text { _ } 56<7 \_3<75
$$

How many different numbers could replace the missing digits?

## Using trial and error:

$\backslash \& \& \& \backslash \& \&, 8$ or 9
(ii) Write the weights of the boxes in order.

Start with the lightest box.

$9 \mathrm{~g}<32 \mathrm{~g}<230 \mathrm{~g}<302 \mathrm{~g}<320 \mathrm{~g}$
